

## REVIEW OF THE PROJECT ACTIVITY

### **“Demand side energy conservation and reduction measures at ITC Tribeni Unit” (0745)**

At its fifty-fifth meeting the Board could not approve the requests for issuance of CERs for "Demand side energy conservation and reduction measures at ITC Tribeni Unit" (0745), submitted by the DOE (DNV) for the monitoring period 01/01/08 - 31/12/08, because:

- (a) The calculation of emission reductions for each project measure was not in accordance with the registered PDD which requires that the emission reductions be calculated using “the total operating hours in the project” times the difference between the pre- and post-project hourly power consumption for each project measure, whereas the PP/DOE calculated the baseline emissions based on annualized electricity consumption and this was not in accordance with the registered PDD and may result in over-estimation of the baseline emissions.
