

CDM proposed standardized baseline form (Version 01.0)

(To be used by a designated national authority (DNA) when submitting a proposed standardized baseline in accordance with the "Procedure for submission and consideration of standardized baselines".)

SECTION 1: GENERAL INFORMATION

DNA submitting this form:	DNA of Madagascar
Developer of the standardized baseline: <i>(Parties, project participants, international industry organizations or admitted observer organizations)</i>	DNA of Madagascar
Party or Parties to which the standardized baseline applies:	Madagascar
Sector to which the proposed standardized baseline applies: <i>(the sector according to the definition of sector in the "Guidelines for the establishment of sector specific standardized baselines")</i>	Measure 3: Methane destruction -Landfill gas capture and destruction-

SECTION 2: LIST OF DOCUMENTS TO BE ATTACHED TO THIS FORM *(please check)*

- ☐ An assessment report presenting how the data was collected, processed and compiled to establish the proposed standardized baselines;
- ☐ Where the proposed standardized baseline applies to a group of Parties, letters of approval of all the DNAs of the Parties to which the standardized baseline applies;
- ☒ Additional documentation supporting the submission (e.g. relevant data, documentation, statistics, studies, calculation tables, etc.), when applicable.

Name of authorized officer signing for the DNA:	Ministry of Environment and Forest
Date and signature for the DNA:	29 July 2013   RANDRIASANDRATANA Germain
Name and contact details of the focal point(s) for any follow up communication: <i>(all communication regarding procedural or technical issues will be sent to the focal point(s))</i>	Randriasandratana Germain President of the Designated National Authority e-mail: randriasandratana@yahoo.fr + 261 34 05 624 03 Ampandrianomby Antananarivo Madagascar

PROPOSED STANDARDISED BASLINE
(CDM-PSB) - Version 01.0

CDM – Executive Board

SECTION BELOW TO BE COMPLETED BY THE UNFCCC SECRETARIAT	
CDM-PSB ID number:	Leave Blank
Date when the form was received at UNFCCC secretariat:	Leave Blank
Have <u>all</u> Parties for which the standardized baseline is applicable fewer than 10 registered CDM project activities as of 31 December 2010? (Y/N):	Leave Blank
CDM-PSB ID number and version: (to be completed by UNFCCC)	Leave Blank

PROPOSED STANDARDIZED BASELINE
(CDM-PSB)
(VERSION 01.0)**

“Standardized baseline for landfill gas destruction in country B”

Submission date

Version 1.0

Source

This proposed standardized baseline was developed using the “Guidelines for the establishment of sector specific standardized baselines”, version 02.0 (Annex 23, EB 65).

Type of standardized baseline approach

The standardized baseline is developed for:

☒ X Additionality demonstration;

☒ X Baseline identification;

☐ Baseline emission estimation.

Please note that one, two or all three items can be checked.

CDM – Executive Board

SECTION A: STANDARDIZED BASELINE DEVELOPED USING THE “GUIDELINES FOR THE ESTABLISHMENT OF SECTOR SPECIFIC STANDARDIZED BASELINES”

This section should only be completed when the standardized baseline is developed using the “Guidelines for the establishment of sector specific standardized baselines”.

Applicability of the standardized baseline

Please provide the following information:

- ☐ *This proposed standardized baseline is applicable to Madagascar.*
- ☐ *This proposed standardized baseline is applicable to waste sector.*
- ☐ *This proposed standardized baseline is applicable to destruction of landfill gas, with or without use of the gas.*
- The measure to which the standardized baseline is applicable:
 - ☐ Fuel and feedstock switch; or
 - ☐ Switch of technology with or without change of energy source (including energy efficiency improvement); or
 - ☒ Methane destruction; or
 - ☐ Methane formation avoidance.

Additionality demonstration

In accordance with Part C of the guidelines (Measure 3: Methane destruction), it was identified that there is no regulation requiring the destruction of a specific percentage of landfill gas in the country. Furthermore, the existing regulations are not enforced in the country.

Therefore, in Madagascar any capture and destruction of landfill gas is additional.

Baseline identification

In accordance with Part C of the guidelines (Measure 3: Methane destruction), it was identified that there is no regulation requiring the destruction of a specific percentage of landfill gas in the country. Furthermore, the existing regulations are not enforced in the country.

CDM – Executive Board

Therefore, in Madagascar the baseline level of destruction of landfill gas is 0%.

Baseline emission factor estimation (if applicable)

Not applicable. Baseline emissions will be determined based on the monitoring of the actual amount of landfill gas capture, as indicated in the “Guidelines for the establishment of sector specific standardized baselines”.

Use of the standardized baseline with an approved methodology

This proposed standardized baseline will be used to replace the sections of demonstration of additionality and identification of the baseline scenario of the eligible methodologies.

This proposed standardized baseline may be used with the following methodologies:

ACM0001 “Flaring or use of landfill gas”

AMS-III.G “Landfill methane recovery”

Validity of the standardized baseline

This proposed standardized baseline will be valid for as long as there is no regulation requiring the destruction of landfill gas in the country, or as long as such a regulation is not enforced. However, the validity will be revised every three years, as suggested in the guidelines for the establishment of sector specific standardized baselines”.

CDM – Executive Board

SECTION B: STANDARDIZED BASELINE DEVELOPED USING A METHODOLOGICAL APPROACH CONTAINED IN AN APPROVED METHODOLOGY OR TOOL

This section should only be completed when the standardized baseline is developed using a methodological approach to estimate baseline emissions contained in an approved methodology or tool. An example for this is the application of the “Tool to calculate the emission factor for an electricity system” to estimate the emission factor for a electric grid.

Applicability of the standardized baseline

Please state the host country (ies) or region(s) within a host country to which the standardized baseline is applicable. In case of region(s) within a host country, please document transparently the geographical boundaries of the region (e.g. provinces, electric grids, etc).

Baseline emission estimation

Please explain how the methodological approach contained in the approved methodology or tool was applied to estimate the baseline emissions of a project activity in (a) country(ies) or region. Follow the steps and guidance of the approved methodologies or tools. Document all underlying data, data sources, assumptions, calculation steps and outcomes in a clear and transparent manner. Note that the underlying methodology or tool has to provide a methodological approach to derive the baseline emissions for a country or region in order to apply this step. This applies, for example, to the methodological tool “Tool to determine the emission factor of an electricity system”.

Use of the standardized baseline with an approved methodology

Please explain how the standardized baseline will be used with the relevant approved methodology(ies) or approved tool, i.e. which (parts of) the approved methodology(ies) or the approved tool are replaced by the standardized baseline.

Validity of the standardized baseline

Please state the vintage of the parameters used to derive the standardized baseline, in accordance with the requirements contained in the approved methodology or tool.

CDM – Executive Board

REFERENCES AND ANY OTHER INFORMATION

Attached documentation includes:

- *Certification by the –relevant national authority- that there is no level of destruction of landfill gas required by applicable regulations, and that existing regulations are not enforced at landfill sites.*
