Subject: SSC category

Reference is made to your query dated of 2 March 2005. The SSC-WG, after considering your submission, concluded that the substitution of an anaerobic waste-water treatment for an aerobic one shall to be considered as a new category under Type III – Other Project Activities, since such project activity does not recover methane (like the case of Category III-D), but rather avoids its formation, by switching the biological stabilization route from anaerobic to aerobic. The SSC-WG decided to develop a draft proposal on this new simplified methodology for being considered in its next meeting, planned to take place in September 12-13.

For more information regarding the outcomes of the second meeting of the SSC WG please refer to: http://cdm.unfccc.int/Panels/ssc_wg.

Best regards,

CDM team
