

 <p style="text-align: center;">CDM: Response form for Request for revision of approved methodologies (version 01.1)</p>	
<i>Date of Meth Panel meeting:</i>	9 – 13 August 2010
<i>Title and number of Request for revision</i>	Propose a new scenario (scenario 23) to include the situation which less biomass is used than the project scenario AM_REV_0183
Summary of the query: Please use the space below to summarize the request for revision on the related approved methodologies.	
<p>ACM0006 “Consolidated methodology for electricity generation from biomass residues” is applicable to electricity generation project activities (cogeneration or not) using biomass residues, including greenfield power plants, power capacity expansion projects, energy efficiency improvement projects and fuel switch projects. The request for revision seeks to expand the applicability of ACM0006 by including a new scenario in the methodology as follows:</p> <p>The project activity involves the installation of a new biomass residue-fired power plant at a site where no power existed prior to the implementation of the project. In the absence of the project, a new biomass residue-fired power plant (“reference plant”) would be installed at the same site as the project, but with lower thermal firing capacity and lower power generation efficiency than the project plant. The reference plant would also use less biomass residue than the project plant. Consequently, in the absence of the project activity, the power generated by the project plant would instead be generated (a) in the reference plant and, since power generation capacity is greater in the project plant than in the reference plant, (b) partly in power plants in the grid. In the case of cogeneration projects, the following conditions would apply (i) the reference plant would also be a cogeneration plant and (ii) in the absence of the project activity, the heat generated by the project plant would be generated in the reference plant.</p>	
Recommendation by the Meth Panel:	
(a) Please use the space below to provide amendments /changes (in your expert view, if necessary).	
Please, refer to the box below.	
(b) Please use the space below for providing guidance, as per Para 93 of EB25 Report, on what type of projects need to revise the PDD as a consequence of the suggested revision, if the recommendation is to revise the methodology.	
Please, refer to the box below.	

Answer to authors of the request for revision by the Meth Panel :

Please use the space below to provide an answer to the authors of the above query

The Meth Panel recommends [to approve](#) the request for revision. The proposed new scenario is covered by the revised version of ACM0006 "Consolidated methodology for electricity and heat generation from biomass residues" developed as part of the de-consolidation of the previous version of ACM0006.

Signed by the Chair, Mr. Lex de Jonge

Date: 13/08/2010
