

 <p style="text-align: center;"><b>CDM: Response form for Request for revision of approved methodologies (version 01.1)</b></p>	
<i>Date of Meth Panel meeting:</i>	02 - 06 May 2011
<i>Title and number of Request for revision</i>	Extending the applicability from SiMn production to FeSi production and other silicon- and ferro alloys  AM_REV_0211
<b>Summary of the query:</b> Please use the space below to summarize the request for revision on the related approved methodologies.	
<p>AM0038 “Methodology for improved electrical energy efficiency of an existing submerged electric arc furnace used for the production of SiMn” is applicable to project activities that improve the energy efficiency of existing submerged electrical arc furnace in the production of SiMn alloy. The emission reductions are claimed for the savings of electricity from the grid, electrode paste and reductants.</p> <p>The request for revision seeks to broaden the applicability conditions, so that the emission reductions can be claimed for submerged electrical arc furnaces used for the production of other alloys.</p> <p>A summary of the proposed revisions:</p> <ol style="list-style-type: none"> <li>1. <i>Applicability.</i> To expand the applicability to ferrosilicon, ferromanganeses, silicomanganese, silicon metal and ferrochrome.</li> <li>2. <i>Baseline and project emissions.</i> To add in the equation the component of other reductants that might be used in the alloy production; and</li> <li>3. <i>General changes.</i> “SiMn” is replaced with “alloy” and “coke and coal” with “reductant”.</li> </ol>	
<b>Recommendation by the Meth Panel:</b> (a) Please use the space below to provide amendments /changes (in your expert view, if necessary).	
<p>The Meth Panel recommends to approve the proposed revision of the methodology.</p> <p>There are some minor changes incorporated by the Meth Panel in the revised methodology submitted by the project participants:</p> <ul style="list-style-type: none"> <li>• The procedure to estimate the remaining lifetime of the existing furnaces should be replaced by the “Tool to determine the remaining lifetime of equipment”.</li> <li>• The historical data should refer to the most recent 3 years only and not to 3 years minimum as it is now.</li> </ul> <p>The draft revised methodology is annexed to the forty-ninth Meth Panel meeting report.</p>	
(b) Please use the space below for providing guidance, as per Para 93 of EB25 Report, on what type of projects need to revise the PDD as a consequence of the suggested revision, if the recommendation is to revise the methodology.	
Not applicable.	

**Answer to authors of the request for revision by the Meth Panel :**

Please use the space below to provide an answer to the authors of the above query

[See above.](#)

Signed by the Chair, Mr. Philip Gwage

Date: 06/05/2011

Signed by the Vice-Chair, Mr. Lex de Jonge

Date: 06/05/2011

**Information to be completed by the secretariat**

F-CDM-AM	AM_REV_0211
Name of the authors of the query:	TUEV SUED
Date when the form was received at UNFCCC secretariat	06 May 2011
Date of transmission to the EB	06 May 2011
Date of posting in the UNFCCC CDM web site	06 May 2011
