

**CDM: Response form for request for clarification on  
Approved Methodologies  
(version 01.1)**

<i>Date of Meth Panel meeting:</i>	27 June - 1 July 2011
<i>Title and number of request for clarification</i>	Clarification on a) definition of cogeneration, b) combination of cogeneration and process heat and c) whether hypothetical boiler can be the baseline  AM_CLA_0209
<b><u>Summary of the query:</u></b>  Please use the space below to summarize the request for clarification on the related approved methodologies.	
<p>The DOE refers to Version 3.2 of ACM0012 “Consolidated baseline methodology for GHG emission reductions from waste energy recovery projects”, which is applicable to project activities utilizing waste energy to generate electricity, to generate heat in elemental process and to cogenerate heat and electricity, etc.</p> <p>The proposed project activity involves the installation of a heat recovery system on the coke oven and the utilization of 40% of the steam for generation of process heat (with steam extraction) and electricity. The baseline is identified to be steam generated by a coal boiler and electricity from the grid. The remaining 60% will be used in a methanol plant and is not part of the CDM project.</p> <p>The DOE seeks the clarification from the Meth Panel on: (1) whether a hypothetical boiler can be used for the H4 scenario; and (2) whether the separate use of steam for process heat and cogeneration is applicable for Type 1 projects.</p>	
<b><u>Recommendation by the Meth Panel:</u></b>  Please use the space below to provide amendments /changes (in your expert view, if necessary).	
Not applicable.	
<b><u>Answer to authors of the request for clarification by the Meth Panel :</u></b>  Please use the space below to provide an answer to the authors of the above query	
<p>The Meth Panel would like to clarify that considering that: (a) 60% of the waste energy carrying medium, (steam from the coke dry quenching system), is diverted outside of the CDM project; and (b) the project activity is related to waste heat recovery, the proposed project does not qualify as a Type I or Type-II project activity. Therefore the version 03.2 of ACM0012 is not applicable to the project activity.</p> <p>The latest approved version 04.0.0 of ACM0012 has expanded the applicability to a variety of uses of waste energy. The project participants may explore whether the latest approved version of the methodology could apply to the project.</p>
