

	CDM: Response form for Request for revision of approved methodologies (version 01.1)
Date of Meth Panel meeting:	15–16 November 2010
Title and number of Request for revision	Extension of methodology AM0024 to cases where the project activity displaces both grid electricity and electricity from an identified power generation source AM_REV_0141
Summary of the query: Please use the space below to summarize the request for revision on the related approved methodologies.	
<p>AM0024 “Baseline methodology for greenhouse gas reductions through waste heat recovery and utilization for power generation at cement plants” is applicable to project activities that use waste heat gas generated in clinker making process (i.e. in the cement kilns) to produce electricity.</p> <p>Current version of the AM0024 limits the application of the methodology to cases where the project activity displaces electricity <u>either</u> from grid <u>or</u> from an identified power generation source. This request for revision aims at expanding the applicability of the methodology to cases where the project activity displaces electricity both from the grid <u>and</u> from an identified power generation source.</p> <p>In order to account for this case, a procedure to determine the emission factor for the displaced sources ($EF_{\text{marginal},y}$) has been introduced, with the following conceptual steps:</p> <ol style="list-style-type: none"> 1. Determine historic electricity supply sources and their generation/supply levels; 2. Determine electricity supply under the project activity; 3. Identify reduced electricity generation by displacing sources; 4. Determine the share of the identified supply sources in the total replaced electricity; 5. Determine emission factors of sources and compile marginal emission factor $EF_{\text{marginal},y}$. <p>As a consequence of this amendment, the calculation of the emission factor has been adopted to the situation where multiple fuels are co-fired (composite emission factor).</p>	
Recommendation by the Meth Panel:	
<p>(a) Please use the space below to provide amendments /changes (in your expert view, if necessary).</p> <p>The Meth Panel recommends to withdraw AM0024 and to consolidate it with the revised ACM0012, which covers the project activities eligible under AM0024. Such project activities include the project described in the PDD submitted along with this request for revision.</p> <p>Therefore the recommendation is <u>not to approve</u> the request for revision.</p>	
<p>(b) Please use the space below for providing guidance, as per Para 93 of EB25 Report, on what type of projects need to revise the PDD as a consequence of the suggested revision, if the recommendation is to revise the methodology.</p>	
<p>Since AM0024 is recommended to be withdrawn and to be consolidated with ACM0012, the projects using methodology AM0024 will have to use ACM0012.</p>	
Answer to authors of the request for revision by the Meth Panel :	
<p>Please use the space below to provide an answer to the authors of the above query</p> <p>As above.</p>	

Signed by the Chair, Mr. Lex de Jonge

Date: 16/11/2010
