

CDM: Response form for request for clarification on Approved Methodologies (version 01.1)

<i>Date of Meth Panel meeting:</i>	11–16 June 2012
<i>Title and number of request for clarification</i>	Clarification on monitoring parameter TEG _y of ACM0002 version 09 AM_CLA_0228

Summary of the query:

Please use the space below to summarize the request for clarification on the related approved methodologies.

This query seeks clarification on whether it is mandatory to monitor parameter TEG_y for the project activities using approved methodology ACM0002 “Consolidated baseline methodology for grid-connected electricity generation from renewable sources” version 9 and applying to the hydropower plant(s) with the power density greater than 10W/m².

The monitoring parameter TEG_y (Total electricity produced by the project activity, including the electricity supplied to the grid and the electricity supplied to internal loads, in year *y*) is only used to calculate emissions from reservoirs with the power density from 4W/m² to 10W/m². However, version 9 of the approved methodology does not explicitly allow to exclude parameter TEG_y for the project activities with the power density greater than 10W/m², while versions 10 and greater of ACM0002 provide necessary clarifications.

Recommendation by the Meth Panel:

Please use the space below to provide amendments /changes (in your expert view, if necessary).

Not applicable.

Answer to authors of the request for clarification by the Meth Panel :

Please use the space below to provide an answer to the authors of the above query

The Meth Panel clarifies that for the project activities applying hydropower plant(s) with the power density greater than 10W/m² and using approved methodology ACM0002, version 9, monitoring parameter TEG_y can be excluded from the monitoring plan.

Signed by the Chair, Mr. Thomas Bernheim
