On 23 July 2008, the Haryana government allotted 1,320 MW Jhajjar thermal power project to CLP India for its development.

CLP had outbid Lanco Infratech and Torrent Power by quoting per tariff of Rs.2.996. Lanco emerged as second lowest bidder at Rs.3.046 per unit, while Torrent Power followed at Rs.3.62 per unit.

The proposed power project with an investment of Rs.7,000 crore will be implemented in two units of 660 MW each. Around 1,215 acres of land has been acquired for the project and letter of intents for environment impact assessment and geo technical studies have already been completed. Draft detailed project report has been prepared from Desein and is in the final stages. The project will get coal linkage from Coal India's North Karanpura fields. The first phase of 660 MW is expected to become operational within 42 months from the signing of the power purchase agreement.

China Light will have to sell 90 per cent of power to Haryana Power Generation Corporation and the balance 10 per cent outside Haryana.
