GERSA

Tegucigalpa, MDC

Issue: „Hidroelectric Project Chamelecón 280“

Dear Mrs:

Trough this statement, I would like to inform that SERNA and this sub-secretary, are giving a total support to renewable energy projects, due to the needs of change in the electricity grid generation, democratization of the market and reduce dependence of fossil fuels. SERNA is motivating the developers of renewable energy projects to register their projects under CDM.

Following our files, the project started the process in this secretary during the year 2004 in order to start with the permit process, water use contract, environmental license and we know this should be finished trough the ENEE, for which the representative of this Secretary acts as president of the boards of directors.

We have been informed that your project is in validation process at UNFCCC to be registered as a CDM project, for this reason, the sub-secretary will be following the culmination of the process and will support the pre- and approval process, in order to be presented at the State Secretary in its condition of national DNA.

Best regards
