Attn: **Mr. Umesh Srivasthava,**

**Sub: Grasim Bathinda – Roller Press project with VSK Separator.**

Dear Mr. Umesh,

This has reference to our discussions on the above subject. We are supplying the Roller Press of M/s KHD Humboldt Wedag GmbH, Germany (RP 13-140/140) with a unique features of installing a VSK Separator which is a combination of V & SKS Separator. This is going to be the first VSK Separator to be installed in semi finish mode along with other separator for Ball mill in any grinding unit in India. The very idea of selecting two separator circuits is to get the higher blaine of cement mainly flyash base PPC cement thereby the absorption of flyash is expected to increase towards more flyash utilization.

This is for your information please.

With best regards,

**G.C. Pandey**
