To Whom It May Concern

Re: Switching to NG in DSW's Potash dryers

This is to clarify that the switching of fuels (from heavy fuel oil to natural gas) in the drying process of the Potash in DSW's dryers will not affect the efficiency of the dryers neither negatively nor positively.

The reason for this is that the heat input into the dryers will remain unaltered , the heat losses will not change either so the overall efficiency will remain the same.

Arie Farkash,

DSW

Gas Conversion Project Manager
