

Certification statement

TUV Rheinland (China) Ltd., the DOE, has performed the verification of the registered CDM project activity “UNFCCC Registration № 6702”, “Jangi 91.8 MW wind farm in Gujarat” in India. The project activity is designed to generate emission reductions by displacement of electricity (from grid) through renewable energy technology.

The project participants are responsible for the collection of data in accordance with the monitoring plan and the reporting of GHG emissions reductions from the project. It is DOE’s responsibility to express an independent verification statement on the reported GHG emission reductions from the project. The DOE does not express any opinion on the selected baseline scenario or on the validated and registered PDD. The verification is carried out in-line with the VVS requirements.

The verification was performed to identify the compliance of the project activity with implementation and monitoring requirements, and to verify the actual amount of achieved emission reductions, through obtaining evidence and information on-site that included i) checking whether the provisions of the monitoring methodology and the monitoring plan were consistently and appropriately applied, ii) the collection of evidence supporting the reported data and iii) emission reductions that are claimed is free from material errors, omissions or misstatements.

The verification is based on:

- PDD (version 03, dated 11/10/2012), registered with the CDM Executive Board on 17/10/2012 and its monitoring plan;
- Approved monitoring methodology ACM0002 ver. 12.3.0 “Consolidated baseline methodology for grid-connected electricity generation from renewable sources”;
- Approved validation report, report No: 8000395338 – 11/211 dated 15/10/2012;
- Monitoring report version 02, dated 12/12/2014.

This statement covers verification period of 426 days between 01/11/2012 to 31/12/2013 (Both days included).

The DOE has raised 1 clarification and 2 corrective action requests, all of which have been successfully resolved by PPs. No Forward action request is raised.

The DOE considers necessary to give reasonable assurance that reported GHG emission reductions were calculated correctly on the basis of the approved baseline and monitoring methodology and the monitoring plan contained in the registered PDD are fairly stated.

The breakdown of the emission reductions for the monitoring period has also been clearly demonstrated, with emission reduction for second commitment period calculated using the latest GWPs and the following is verified to be correct :

Actual emission reduction for the monitoring period up to (and including) 31 December 2012	21,418 tCO ₂ e from 01/11/2012 to 31/12/2012 including both days
Actual emission reduction for the monitoring period from (and including) 1 January 2013	202,993 tCO ₂ e from 01/01/2013 to 31/12/2013 including both days

The DOE , hereby certifies that the project activity, achieved emission reductions by sources of GHG equal to 224,411 tCO₂ equivalent and all monitoring requirements have been fulfilled.

The DOE states that the Claimed emission reductions are free from material errors, omissions and misstatements with a reasonable level of assurance.
