21.12.2012

Dear CDM team,

We are submitting this letter in relation to the outcome of the information and reporting check for the request for issuance of the CDM project “Catalytic N<sub>2</sub>O destruction project at the new nitric acid plant PANNA 4 of Enaex S.A.” (5393).

We received your feedback on 20/12/2012 and can confirm that the identified issue are based on an incorrect QAL2 factor for the volumetric flow of the gaseous stream in time interval t on a dry basis ( $V_{t,db}$ ) in the 1<sup>st</sup> monitoring period. The value 0.964 has been applied instead of 0.941. This mistake has slightly decreased the emission reduction of the 1<sup>st</sup>. It can be confirmed that the actual request for issuance covering the 2 monitoring period, because the project emissions were slightly overestimated. 2<sup>nd</sup> monitoring period of 01 February 2012 to 30 June 2012 is based on the correct QAL2 correction factor which is 0.941 from QAL2 report issued by AIRTEC (date of QAL2 test 14.12-16.12.2011) for the volumetric flow of the gaseous stream in time interval t on a dry basis ( $V_{t,db}$ ).

Therefore, we would like to request the UNFCCC Secretariat to consider this response as per paragraph 193 of the Clean Development Mechanism Project Cycle Procedure (Version 03.1, EB 70 Annex 04, page 34), and hence treat the request for issuance covering the 2<sup>nd</sup> monitoring period of 01 February 2012 to 30 June 2012 as complete and close the information and reporting check based on the submission of this response.

In order to easy the completeness check, we are submitted together with this response the relevant information from the QAL2 report issued by AIRTEC (date of QAL2 test 14.12-16.12.2011).
