

## BUREAU VERITAS CERTIFICATION HOLDING SAS

### CERTIFICATION STATEMENT

Bureau Veritas Certification has performed the 1<sup>st</sup> periodic verification of Reforestation on Degraded Lands in Northwest Guangxi in Longlin County, Tianlin County and Lingyun County in the north-western Guangxi Zhuang Autonomous Region, in southern China, with the Registration No. 3561, which applies the methodologies AR-ACM0001 ver. 5.2.0. The verification is based on the currently valid documentation of the United Nations Framework Convention on Climate Change (UNFCCC).

The management of Guangxi Longlin Forestry Development Company Ltd. is responsible for the preparation of the GHG emissions data and the reported net anthropogenic GHG removals by sinks of the Project on the basis set out within the registered PDD. The development and maintenance of records and reporting procedures in accordance with that plan, including the calculation and determination of net anthropogenic GHG removals by sinks from the Project is the responsibility of the management of the Project.

Bureau Veritas Certification verified the Monitoring Report version 02 dated 16/10/2012 for the reporting period as indicated below. Bureau Veritas Certification is able to confirm that the Project is implemented as planned and described in registered PDD, the special change in the actual forestry situation compared to the registered PDD is identified as minor in nature according to "Guidelines on accounting of specified types of changes in A/R CDM project activities from the description in registered project design documents" (Version 02.0) (Annex 24, EB 66). Multiple-use forests are established on degraded lands being essential for anthropogenic GHG removals by sinks. The monitoring system is in place and the project is generating net anthropogenic GHG removals by sinks.

Bureau Veritas Certification is able to confirm that the net anthropogenic GHG removals by sinks are calculated without material misstatements. Our opinion relates to the Project's actual net GHG removals by sinks and resulting net anthropogenic GHG removals by sinks reported and related to the valid and registered project baseline, and its associated documents. Based on the verified amount of net anthropogenic GHG removals by sinks stated in the verification report, Bureau Veritas Certification confirms the following statement:

Reporting period:	01/01/2008 to 30/06/2012	
Baseline net GHG removals by sinks:	2,116.5	t CO <sub>2</sub> equivalents.
Actual net GHG removals by sinks:	37,858.9	t CO <sub>2</sub> equivalents.
GHG emissions due to leakage:	0	tCO <sub>2</sub> equivalents.
Net anthropogenic GHG removals by sinks:	35,742	t CO <sub>2</sub> equivalents
