>> The methodology AMS III.AJ comprises activities for recovery and recycling of high density polyethylene (HDPE) and low density polyethylene (LDPE) materials in the municipal solid waste to process them into intermediate or finished products. However there are other types of plastics which can be recycled to displace the production of virgin materials in dedicated facilities thereby resulting in energy savings and hence emission reductions.

The revision is proposed to include the project activities for recovery and recycling of Polyethylene Terephthalate (PET) to process them into intermediate or finished products. The default values for PET have been taken from published IEA (2009) data.
