Clarification on the baseline : As per methodology AMS- III.H Version 15 para 19(b) sub para (i)

In the case of Greenfield and capacity addition projects, one of the following procedures shall be used to determine the baseline emissions:

(i) Value obtained from a measurement campaign in a comparable existing wastewater treatment plant i.e. having similar environmental and technological circumstances for example treating similar flow and same type of wastewater (domestic, industrial, etc.), located in the same host country and region. Average values from the measurement campaign shall be used and the result shall be multiplied by 0.89 to account for the uncertainty range (30% to 50%) associated with this approach;

Question 1: When methodology says similar flow and same type of wastewater then up to what % of variation in wastewater characteristics (e.g. COD, flow rate etc) of comparable existing wastewater treatment PP can consider to set up baseline of proposed Greenfield project?

Request for revision of an approved SSC methodology
