

 <p align="center"><b>CDM: Form for submission of queries from DOEs to the Methodologies Panel regarding the application of approved methodologies (version 01)</b>  <i>(To be used by DOEs for presenting questions / proposals / amendments related to the applicability of approved methodology)</i></p>	
Name of the entity (DOE) submitting this form	Det Norske Veritas Certification Ltd.
Reference number and title of the approved methodologies	AM0014
Title/Subject (give a short title or specify the subject of your submission, maximum 200 characters):	Applicability of AM0014 for projects that supply small amounts of excess electricity to the grid
Attach CDM-PDD example of project activity where applicability raises problem:	<input checked="" type="checkbox"/> See attached document titled "AM0014 Methodology Utilization Assessment"
Date and signature for the DOE	15 November 2005 <i>Michael Lehmann</i>
<b>Submitted queries</b> Please use the space below to substantiate the queries relating to the application of approved methodologies. If the questions are related to a project activity under development or implementation, please describe the context in which they arose. If you are proposing amendments to existing methodologies, please specify the text you want to change or introduce. If necessary, attach files or refer to sources of relevant information.	
<b>If you have a question relating to the application of an approved methodology, please specify and provide reference to the exact project activity to which it applies.</b> One of the applicability criteria of AM0014 is that "no excess electricity is supplied to the power grid and no excess heat from the cogeneration system is provided to another user". DNV has been commissioned to perform a validation of the "Natural Gas-Fired Cogeneration Plant Replacing Oil-Fired Boilers" in Brazil. This project proposes to supply small amounts of electricity to the local grid in situations where the cogeneration plant produces excess electricity. Hence, DNV requests the Meth Panel's guidance on whether a project, which main objective is to supply electricity and heat to designated consuming facilities, but which supplies small amounts of electricity to grid, can apply AM0014 and whether AM0014 can be amended to also apply to projects which small electricity supplies (limit to be defined) to the grid. The project participants of the "Natural Gas-Fired Cogeneration Plant Replacing Oil-Fired Boilers" have discussed the applicability of AM0014 for their project in the attached document titled "AM0014 Methodology Utilization Assessment".	
<b>If you propose an amendment to an approved methodology, please provide reasons.</b> >>.	
<b>In case you propose the amendment to the approved methodologies, please provide your draft below, if not included in an annex:</b> >>	
Date of submission of contribution:	15 November 2005

Information to be completed by the secretariat	
Date when the form was received at UNFCCC secretariat	
Date of transmission to the Meth Panel and Executive Board
